PROFILE

5 years of continuous IT and data practice (2021 – present), including 3 years of apprenticeship at EssilorLuxottica (190,000 employees) on international AI and data projects. **RAG chatbot designed and deployed to production**, cutting information search time by 30% for the teams. **Contributed to a major BI migration** (Qlik to SAP BusinessObjects) for European business teams. Comfortable across the full cycle: data engineering (pipelines, modeling, quality), BI and decision analytics, design and deployment of AI solutions (LLMs, RAG, agents), and business analysis (requirements, specifications, UAT, training). Swiss resident, available immediately.

KEY SKILLS

AI & LLM

RAG · LangChain · OpenAI & Anthropic API · Prompt engineering · Embeddings · Vector stores · AI agents · Response quality evaluation

DATA ENGINEERING

Python · SQL · PySpark · ETL/ELT · Dimensional modeling (star, snowflake) · Data quality · CI/CD · Git

CLOUD & PLATFORMS

Databricks · Microsoft Azure · Azure Data Factory · Delta Lake · Snowflake

BI & ANALYTICS

Power BI (DAX) · SAP BusinessObjects (Web Intelligence) · Qlik · Advanced Excel · KPI design · Dashboards

DATABASES

Advanced SQL · Query optimisation · PostgreSQL · MongoDB · SAP BO semantic universes · Integrity controls

BUSINESS ANALYSIS & METHODS

Requirements gathering · Functional specifications · UAT & testing · Change management · Agile

TOOLS & ENVIRONMENTS

VS Code | **Git & GitHub** | **Claude Code** | **Cursor** | **Copilot Studio** | **LangChain** | **Postman** | **Databricks Notebooks** | **Azure Data Factory** | **Power BI** | **SAP BO** | **Qlik** | **Talend** | **Jira** | **Confluence** | **Excel**

PROFESSIONAL EXPERIENCE

EssilorLuxottica – Créteil (France) & Bangkok | Global group – 190,000 employees | Apprenticeship | **Oct. 2022 – Oct. 2025**

Generative AI Engineer (LLM & RAG)

- Designed and deployed to production an internal **RAG chatbot** (LangChain, embeddings, vector store), cutting **information search time by 30%** for the teams.
- Built the **full AI pipelines**: ingestion and cleaning of internal documentation sources, chunking, vector indexing and retrieval strategy.
- Integrated and **benchmarked several LLMs**; built sets of business questions to evaluate answer quality, relevance and consistency at each iteration.
- Iteratively optimised **prompt engineering and retrieval strategies** (prompt structure, search parameters, chunk size).
- Worked with business and IT teams to **define use cases, measure impact and industrialise deployment**; monitored answer quality after go-live.

Data Engineer

- Deployed and administered the **Databricks (Azure)** platform, processing multi-source data across 3 regions (Europe, US, Asia).
- Automated **ETL pipelines in Python, SQL and PySpark**, ensuring reliable, high-performing data flows for decision-making.
- Orchestrated data flows with **Azure Data Factory and Delta Lake**, with versioning and integration through Git and CI/CD.
- Modeled data (**star and snowflake schemas**), built the **SAP BO semantic universes** and optimised queries and reports.
- Implemented **data quality and integrity controls** and technical documentation, easing maintenance and onboarding.

BI Business Analyst

- Contributed to the **BI migration from Qlik to SAP BusinessObjects**: gathered business requirements across Europe, wrote functional specifications and coordinated with technical teams.
- Took part in **user acceptance testing**: prepared test cases, ran validation sessions with business users and tracked defects through to resolution.
- Supported **change management**: training sessions delivered in French and English (Europe, US and Asia teams), illustrated documentation and **post-migration support**.
- Defined and formalised **business KPIs** (inventory, sales, supply chain) with management across Europe, US and Asia.
- Liaison between Business and IT teams across **3 continents** for the inventory optimization project.

Data Analyst

- Designed and deployed **decision-making dashboards** (Power BI, SAP BO) tracking business KPIs for management across 3 continents.
- Ran **ad hoc analyses** for the global inventory optimization project, delivering actionable recommendations.
- Automated **recurring reporting** and defined upstream data quality rules, reducing anomalies in deliverables.

Airloop La Plage – Geneva | Leisure & hospitality | **June 2026 – ongoing**

Chef de rang (head waiter): service coordination and client relations in a high-traffic environment, alongside my search for an IT role. Professional base in Geneva.

Planzer – Geneva | Logistics & transport, Swiss market leader | **2026 – ongoing**

Operational role in the supply chain: flow management in a demanding, high-tempo environment.

ENGINEERING ACADEMIC PROJECTS (CESI, 2021 – 2025)

- **AI applied to healthcare**: model predicting cancer recurrence risk from patient data: data analysis and preparation, **anonymisation**, training and comparison of **several models**, performance evaluation.
- **Hospital Big Data**: consolidation of data from **heterogeneous sources** for a hospital group: **ETL** chain, **data warehouse**, data cluster and statistical BI reporting.
- **Advanced algorithmics**: delivery route optimisation to reduce fuel consumption: **operations research**, complexity analysis and **metaheuristics**.
- **Cybersecurity**: post-incident analysis of a compromised information system: identification of attack vectors, **penetration testing** and hardening recommendations.
- **Systems & network administration**: integration of an acquired company's IS (**Active Directory**, virtualisation and containerisation, proxy, firewall, cryptography) and compliance upgrade of a multi-country IS (**VoIP, QoS, BGP/EIGRP routing**, mail server).
- **Development**: **automated file backup solution** in client-server architecture (C#, design patterns, synchronisation, Git versioning).

PERSONAL PROJECTS

- **"Market Data Pipeline"** (2026): Python pipeline feeding a **PostgreSQL** database daily with financial market data: star schema modeling, integrity controls and automated backups.
- **"Job Hunter", personal AI agent** (2026): automation of my job search (monitoring, filtering offers, tailoring applications), with **MongoDB** storage.
- **"Professional CV Generator"** (2026): tailored CV creation service for individuals: **orchestration of several AI models**, automated layout (HTML/CSS to PDF) and per-offer customisation.
- **Personal portfolio** designed and deployed (toumilyes.netlify.app), showcasing my data and AI projects.

EDUCATION

Engineering degree in Computer Science, Data & AI specialisation — **2021 – 2025**
CESI Graduate School of Engineering – Lyon | CTI-accredited – MSc equivalent (Bac+5)
Project-based learning (A2P2): data, AI, databases, networks, cybersecurity and project management.

1st year BSc, Mathematics — **2019 – 2020**
Université Côte d'Azur Valrose – Nice, France

CERTIFICATIONS

- ✓ Azure Data Fundamentals (DP-900)
- ✓ Generative AI Fundamentals – Databricks
- ✓ Cisco CCNA – Networking
- ✓ Databricks Lakehouse Fundamentals
- ✓ AI Agent Fundamentals – Databricks
- ✓ TOEIC – C1 level (910/990)

LANGUAGES & INFORMATION

French – Native **English** – Advanced (C1) **Spanish** – Intermediate (B1)

Availability: Immediate • **Area:** Geneva / Lausanne / French-speaking Switzerland • **Status:** Swiss resident – B work permit – EU citizen
